

## Document Store Analyser

### For Micro Focus Content Manager

IK Document Store Analyser provides a house keeping task for Micro Focus Content Manager by producing a report, and actions, that can be taken on orphaned documents in 'read-only' document stores. It does this by querying the database and analysing the document store to determine those documents which are left behind from a deletion of metadata records that has occurred from a defensible disposal process or 'ad-hoc' record deletion. The orphaned documents in the store in this case have no corresponding metadata record in the database so cannot be found using Content Manager by itself. The tool prepares a report of its store analysis and gives actions for the Administrator to take on those documents.

---

#### FEATURES;

---

- ✓ Scans and identifies documents from doc store and which has no corresponding database
- ✓ Exportable to CSV file
